Gig Cashflow Index (GCI)

1. IDEA

Millions of gig workers are credit invisible. Traditional systems depend on past loans. GCI evaluates real cashflow behavior.

2. INNOVATION

- Cashflow-based scoring

- Behavioral finance features

- Manipulation detection (Isolation Forest)

- Stress simulation (income drop scenarios)

- Explainable AI outputs

3. EXECUTION (TECH STACK)

Backend: Python, FastAPI

ML: Scikit-learn, Pandas, NumPy

Database: PostgreSQL

Frontend: React

Deployment: Docker

Pipeline:

Raw Data → Cleaning → Features → Fraud Detection → Risk Model → Score → Dashboard

4. FUTURE SCOPE

- Deep learning models

- Account Aggregator integration

- Real-time scoring

- Embedded fintech APIs

5. FEASIBILITY & PRACTICALITY

- Uses open-source tools

- Scalable via cloud

- Regulatory aligned

- Low cost MVP

6. GRASSROOT IMPACT

- Financial inclusion
- Reduced dependency on informal lending
- Better credit decisions
- Supports government schemes

7. FINAL OUTPUT

- GCI Score (300–900)
- Probability of Default
- Stability & Liquidity Scores
- Fraud detection labels
- Explainability report
